

Acquisition Brief - MentalIntegrity.com

Asset overview

Domain name

- MentalIntegrity.com

Nature and purpose

A descriptive domain name offered for acquisition. The expression mental integrity appears expressly in Article 3 of the Charter of Fundamental Rights of the European Union (reference 1).

This brief presents the asset, four primary references and possible documentary uses. It does not describe an existing institutional program and contains no market, revenue or resale-value projections.

Scope of the transfer

The proposal concerns the domain name. It includes no rights over an official text, public mandate, third-party trademark, software or database. The precise contractual scope remains to be agreed.

Independence

Privately held asset. No affiliation, endorsement or intention to acquire the domain is claimed from the European Union, UNESCO, the Council of Europe or any Chilean authority.

Revised 2 October 2026. Sources and links: page 4.

1. Four primary references with distinct scopes

1 - European Union: Charter, Article 3

Article 3 recognizes respect for physical and mental integrity. In medicine and biology, it refers in particular to free and informed consent. This establishes the legal use of the expression; it gives no special status to a domain name.

2 - Chile: Law 21.383, 2021

This amendment to Article 19(1) of the Constitution links scientific and technological development to respect for life and physical and psychological integrity. It provides for particular protection of brain activity and information derived from it. Its scope is national; it is not a worldwide neurotechnology regime.

3 - UNESCO: recommendation adopted 11 November 2025

The Recommendation on the Ethics of Neurotechnology covers medical and non-medical uses, neural data and certain inferences about mental states. It proposes principles and implementation measures for Member States. It is a recommendation, not a certification or evidence that a product complies with applicable requirements.

4 - Council of Europe: report published 1 April 2026

Dated March 2026, the rapporteurs' report records the workshop of 18 November 2025 on human rights and neurotechnologies. It considers protection under existing rights and questions that remain open. The authors' views do not necessarily reflect the Council of Europe's official policy.

Reading these references

These documents differ in authorship, territorial scope and effect. They establish neither demand to acquire the domain, a need for one address, nor financial value. Placing them together does not create a new obligation.

2. Possible documentary uses

The following are possible editorial choices for a buyer. They describe neither an operating activity nor demand confirmed by the organizations cited.

Documentary resource

- Catalog primary texts with their author, date, status and territorial scope.
- Distinguish binding texts, recommendations, reports and proposals still under discussion.
- Publish explanatory notes that connect factual claims to verifiable sources.

Project presentation

The domain could present a research project or editorial initiative: purpose, responsible team, work, sources and contact. Any such project would remain for the buyer to design, fund and administer.

3. Limitations and responsibilities

- No medical, psychological, therapeutic or emergency service is offered through this transfer.
- No authority to set standards, certify, assess regulatory compliance or represent a public body is transferred.
- No neural, health or other personal dataset is offered.

The buyer remains responsible for any content, service, data processing or communication it deploys. Its obligations will depend on the actual activity and the jurisdictions concerned.

4. Acquisition and contact

Initial contact and agreement on the intended use; confidentiality agreement if needed; written offer; agreement on transfer terms; third-party escrow if agreed; transfer through the relevant registrars.

Price, timing, fees and transfer arrangements are negotiable. The brief provides no estimate of returns, savings, time gains, future demand or resale price.

5. Primary references

1. EU Charter of Fundamental Rights, Article 3 - EUR-Lex

Consolidated text in OJ C 326, 26 October 2012. Right to integrity of the person.

2. Chile, Law 21.383 - Biblioteca del Congreso Nacional

Constitutional amendment promulgated 14 October 2021.

3. UNESCO - Recommendation on the Ethics of Neurotechnology

Adopted 11 November 2025. Official text, Legal Affairs.

4. Council of Europe - Report of the Rapporteurs

Workshop on Human Rights and Neurotechnologies, March 2026. Publication announced 1 April 2026.

The references provide documentary context. They imply no partnership, sponsorship or commitment to acquire the domain.

Descriptive document. Does not constitute legal, regulatory, financial, medical or investment advice.
